# DevOps toolchain analysis: Get your DevOps back on track

eficode

In today's fast-paced software development world, a dynamic DevOps toolchain boosts speed, security, and compliance. However, managing it takes time and focus away from actual software development. Eficode ROOT streamlines your DevOps processes, letting your team focus on delivering secure, high-quality software efficiently.

Start your journey with an Eficode CTO-led DevOps toolchain analysis!

Key components of the online session

Toolchain mapping:

- Live call with Eficode CTO Kalle Sirkesalo to map out a visual diagram of your organization's entire tooling and process landscape.

- Diagram provides a comprehensive view of the current toolchain, allowing for real-time feedback and discussion.

Process analysis:

- Mapping of existing DevOps processes to identify inefficiencies, redundancies, and areas for standardization.

- Highlight key areas where process improvements can enhance overall efficiency and collaboration between teams.

Tool review:

- Review of tools currently in use across the organization, including those for version control, CI/CD, infrastructure management, and security.

- Assessment of effectiveness and coverage of each tool in meeting the organization's needs.

Actionable outcomes:

- Identification of specific gaps in the current toolchain and processes.

- Proposition of targeted improvement actions to address these gaps and enhance the DevOps workflow.

CTO-led toolchain analysis session overview

Outcome
Identification of gaps and improvement actions for DevOps tooling and processes.

Duration
90-minute session led by Kalle and his expert team.

Participants from your side
Key stakeholders from development, operations, and platform engineering.

Kalle Sirkesalo

Chief Technology Officer
Eficode Managed Services

Expert profile:
Kalle has helped enterprises to build and realize their tooling strategies.

Helping customers succeed in their IT strategies
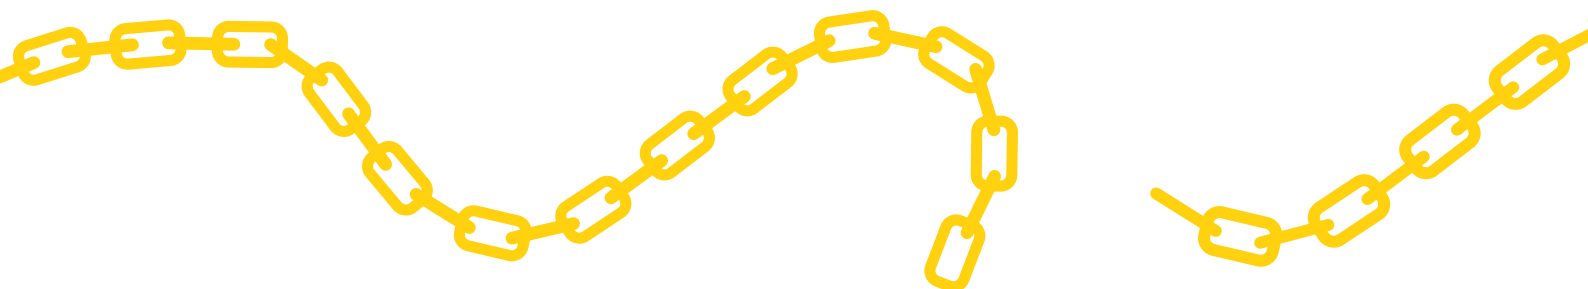

CTO-led toolchain analysis session overview

Flexible for your requirements:

Our services ensure you work with optimized DevOps tools and processes. With our unique software and automations your ownership of DevOps tools is a breeze. Eficode's world-leading DevOps experts enable your teams to focus on building, testing, and releasing software—effectively and efficiently. Whether your toolchain consists of SaaS tools like Atlassian Cloud and GitHub Copilot, you'll get a seamless experience across your tools.

> **I have participated in these analyses before, Eficode managed to get into the details in one call that usually take eight or more meetings**
>
> A major financial institution

TAKE THE NEXT STEP

Managing complex toolchains doesn't have to be a burden. Eficode's Developer Platform as a Service gives you full control, simplifying processes and optimizing performance throughout your software development.

Elevate your DevOps with expert guidance, seamless integrations, and continuous optimization.
