

DEVOPS TOOLCHAIN ANALYSIS: Get your DevOps back on track

In today's fast-paced software development landscape, an evolving DevOps toolchain can accelerate software development while enhancing security and compliance. But managing this toolchain diverts valuable time and focus away from actual software development. With Eficode ROOT, you can streamline your DevOps processes, allowing your team to concentrate on what matters most—delivering high-quality software efficiently and securely.

Start your journey with an Eficode CTO-led DevOps toolchain analysis!

Key components of the online session

Toolchain mapping:

- Live call with Eficode CTO Kalle Sirkesalo to map out a visual diagram of your organization's entire tooling and process landscape.
- Diagram provides a comprehensive view of the current toolchain, allowing for real-time feedback and discussion.

Tool review:

- Review of tools currently in use across the organization, including those for version control, CI/CD, infrastructure management, and security.
- Assessment of effectiveness and coverage of each tool in meeting the organization's needs.

Process analysis:

- Mapping of existing DevOps processes to identify inefficiencies, redundancies, and areas for standardization.
- Highlight key areas where process improvements can enhance overall efficiency and collaboration between teams.

Actionable outcomes:

- Identification of specific gaps in the current toolchain and processes.
- Proposition of targeted improvement actions to address these gaps and enhance the DevOps workflow.

CTO-led toolchain analysis session overview

- **Outcome:** Identification of gaps and improvement actions for DevOps tooling and processes.
- **Duration:** 90-minute session led by Kalle and his expert team.
- **Participants from your side:** Key stakeholders from development, operations, and platform engineering.

Kalle Sirkesalo

Chief Technology Officer
Eficode Managed Services

Expert profile:

Kalle has helped enterprises to build and realize their tooling strategies. [Learn more about Kalle's mission to optimize our customers' DevOps strategies](#)

Eficode Managed Services

Flexible for your requirements:

Our services ensure you work with optimized DevOps tools and processes. With our unique software and automations your ownership of DevOps tools is a breeze. Eficode's world-leading DevOps experts enable your teams to focus on building, testing, and releasing software—effectively and efficiently. Whether your toolchain consists of SaaS tools like Atlassian Cloud and GitHub Copilot, you'll get a seamless experience across your tools.

"I have participated in these analyses before, Eficode managed to get into the details in one call that usually take eight or more meetings."
